

# STABILIZER PREMIER FIBRES

- Gives Stability and elasticity to existing sand surfaces
- Provides greater moisture retention
- Allows significant impact absorption
- Improves return of surface through 'track memory'
- Greater consistency in varying weather conditions and minimises effect of frost
- Rides on top of surface
- Lower maintenance requirement
- Easy to install - no specialist equipment needed

*"The premier fibre has definitely stabilised our existing sand making it easier for our RDA Sidewalkers and improving the performance of show jumping and dressage horses."*

Laurel View Equestrian Centre.

**Stabilizer Premier** will dramatically enhance the performance of any sand surface.

It can be easily incorporated into new or existing sand.

**Stabilizer Premier** is the ultimate additive. The unique composition of polypropylene and rubber fibre is further enhanced with the addition of Geopad felt and Cleff elasticated fibres providing lateral and vertical binding to achieve optimum consistency and cushioning.

The Premier fibres can also be coated with special high performance wax for greater adherence to the sand.

The fibre being of synthetic origin will not break down or degrade thus enhancing the life expectancy of the product.
