

PREMIER TRACK

*A high-grade surface teamed with our
Ebb & Flow drainage system*

Our high-performance Premier Track has been developed with consistency, stability and ease of maintenance in mind.

Best suited to larger arenas which are subjected to heavier footfall, the Premier Track consists of two key elements. The surface itself is a unique blend of high-grade silica sand mixed with polypropylene synthetic stabilising fibres, providing an excellent level of bounce, shock absorption and energy return to keep horses healthy and prevent lower-limb injuries. Underneath the surface, an Ebb & Flow drainage system is installed, which automatically maintains the level of surface moisture, eliminating the need for above-ground watering systems.

With constant moisture control afforded by the underground system, the surface is unlikely to become dusty, and the elasticity, created through the capillary action of the sand, will be maintained more accurately than would be achieved with manual watering.

Benefits

- Suitable for all disciplines
- Suited to indoor and outdoor use
- Ideal for larger, high-level competition centres and training or racing facilities
- Non-waxed, all-weather track laid over a sophisticated drainage system

Tried & Tested...

The Ebb & Flow system is popular with large equestrian facilities, such as the new British Showjumping National Training Centre and the David Broome Event Centre, who have praised it for the ease of maintenance it provides and the consistent surface quality.

ECONOMY TRACK

A pre-blended, non-waxed surface guaranteeing consistent quality

Our Economy Track is an ideal option for those with small to medium sized yards who are looking for a new track that is cost-effective, without having to compromise on quality or performance.

Pre-blended in our warehouse, the Economy Track arrives on site perfectly mixed and ready to be installed by our team. Purchasing your track pre-mixed, as opposed to purchasing the loose components, ensures the ratio of sand to fibre is precisely balanced and evenly distributed throughout the surface.

The Economy Track is a dry, non-waxed surface which will require regular irrigation, particularly in dry periods, to maintain its condition and performance.

Benefits

- Suitable for all disciplines
- Suited to indoor and outdoor use
- Increased stability and excellent water retention
- Pre-blended at our warehouse for simple installation and guaranteed consistency
- Ideal for those with damp/wet climates
- Excellent value, without compromising on quality or performance

SAND AND SYNTHETIC FIBRE

Our cost-effective and environmentally-friendly option for improved stability

At Equestrian Surfaces, we offer unmixed synthetic fibre and sand as part of our range. Providing a low-cost alternative to one of our pre-mixed tracks, the synthetic fibres and sand are supplied to be mixed on site, allowing you to save on the overall cost of your project whilst still providing an excellent riding surface.

Opting for your materials to be delivered this way may mean that the blend is not as efficient as that of a pre-mixed track that has been composed in our warehouse. However, the fibre and sand that we supply is still of the highest quality and will provide good footing for users.

Benefits

- Suitable for all disciplines
- Suited to indoor and outdoor use
- A low-cost option that offers top-quality results
- Ideal as a 'top-up' to an existing surface, for renewed performance
