

PREMIER TRACK

*A high-grade surface teamed with our
Ebb & Flow drainage system*

Our high-performance Premier Track has been developed with consistency, stability and ease of maintenance in mind.

Best suited to larger arenas which are subjected to heavier footfall, the Premier Track consists of two key elements. The surface itself is a unique blend of high-grade silica sand mixed with polypropylene synthetic stabilising fibres, providing an excellent level of bounce, shock absorption and energy return to keep horses healthy and prevent lower-limb injuries. Underneath the surface, an Ebb & Flow drainage system is installed, which automatically maintains the level of surface moisture, eliminating the need for above-ground watering systems.

With constant moisture control afforded by the underground system, the surface is unlikely to become dusty, and the elasticity, created through the capillary action of the sand, will be maintained more accurately than would be achieved with manual watering.

Benefits

- Suitable for all disciplines
- Suited to indoor and outdoor use
- Ideal for larger, high-level competition centres and training or racing facilities
- Non-waxed, all-weather track laid over a sophisticated drainage system

Tried & Tested...

The Ebb & Flow system is popular with large equestrian facilities, such as the new British Showjumping National Training Centre and the David Broome Event Centre, who have praised it for the ease of maintenance it provides and the consistent surface quality.
