HIGH-PERFORMANCE, ALL-WEATHER RACING SURFACE SUPPLIED WORLDWIDE.

At Equestrian Surfaces Ltd, we take a great deal of pride not only in the quality of our products, but also in the quality of the service we provide.

With over 35 years of trade experience, we have successfully completed installations at racetracks, gallops and training tracks across the world.

Our racing surfaces are manufactured in-house in the UK with the use of state-of-the-art, customised equipment and technology to comply with all relevant safety regulations to the highest standards.

With high levels of performance, durability and consistency in mind, each surface we manufacture has been designed to withstand the high demands of the sport.

Our surfaces are offered on a supply-only basis, or as part of a complete turnkey solution in which each stage of the process - planning, construction, installation and maintenance - is meticulously monitored and expertly carried out.

We provide a comprehensive back office support network for our valued clients, and we also manufacture quality maintenance equipment, which can be selected to suit the level of requirement for any track or training facility.

As part of our maintenance services, we also offer a full maintenance schedule for racetracks and their track managers, which includes monthly reports and surface analysis, providing our clients with the confidence that their surface is being monitored and managed by experienced professionals on a regular basis.

RACING SURFACES

Specifically designed to facilitate the high demands of the sport, our racing surfaces are consistent, fast and supportive, providing optimal levels of cushioning and energy return, supporting movement at high speed, and ultimately reducing the risk of injury.

Training on Cushion Track™ Racing at
Hollywood Park, USA

CUSHION TRACK™ RACING

A fast, safe and durable surface for elite performance, supporting intense training regimes and all-weather racing events

BENEFITS

- Designed for very heavy footfall
- Minimal kickback
- High-performance, providing cushioning and support
- Consistent performance in all climates

OVERVIEW

Our premium racing surface has been tested across the world and is renowned for being the most consistent surface available on the market. Having each stage of the production process overseen by our experienced in-house team of production engineers allows us full control over the composition of the product, enabling us to tweak the make-up of the surface when required in order to see it adapted to suit specific climates.

As a consistent surface with the capacity to host all levels of all-weather racing, Cushion Track™ Racing offers unmatched safety characteristics for horses when racing, providing minimal kickback and drastically decreasing the risk of injury.

“

During the first two weeks of Cushion Track™ being installed at Hollywood Park, no serious injuries have been reported among any of the horses exercising on the surface, with local trainers boasting that horses are getting healthier every day.

– Hollywood Park Spokesperson

CUSHION TRACK™ PREMIER

Our premium training surface, trusted by professionals across the globe for gallops, training tracks and lunge pens for stud farms

BENEFITS

- Suited to indoor and outdoor use
- Designed for very heavy footfall
- Minimal maintenance
- Consistent in all weather conditions
- Premium, top-of-the-range training surface developed with safety in mind
- High-performance, providing cushioning and support

OVERVIEW

Cushion Track™ Premier is our premium equestrian surface, designed for use in the racing industry on gallops, training tracks and lunge pens.

Constructed with a unique blend of multi-washed silica sand and environmentally friendly synthetic fibres, coated in a specifically formulated wax, our Cushion Track™ Premier is highly durable and designed to withstand continual daily use and very heavy footfall, in all weathers.

“

We have used Equestrian Surfaces for over 15 years supplying surfaces for our facility in Upper Lambourn. The recent success of the Cushion Track™ surface on the Peter Walwyn Gallop led us to installing the Cushion Track™ surface on The Long Gallop, which has received great praise from all of the trainers who use it.

– Will Riggall, Lambourn Operations Manager

Cushion Track™ Premier in use on gallop at Lambourn

Wax Track+ on gallop in Lockerbie

WAX TRACK+

Our high-performance, high-impact training surface for gallops, canter tracks and jump lanes

BENEFITS

- Suited to indoor and outdoor use
- Durable in all climates and weather conditions
- Ideal for training tracks and schooling strips
- High-performance, providing cushioning and support

OVERVIEW

Our Wax Track+ is a regular, high-impact work surface used on training tracks and schooling strips across the UK. Offering quality and consistency, this high-performance surface has been designed to support the training demands of both National Hunt racing and flat racing, allowing riders to work confidently and with peace of mind.

Highly adaptable, this surface can be opened up with minimal effort in order to allow trainers to work their horses deeper into the surface to build stamina. Equally, a faster surface can be achieved for those training in flat racing simply by tightening the mix.

“

I've had Wax Track+ installed on my 250m schooling strip, and I couldn't be more impressed with it. The horses work well and with confidence, and the surface itself has been so easy to maintain; even during poor weather conditions, we've still been able to train every day, and it hasn't frozen over once, despite recent bouts of snow and freezing temperatures.

– Olly Murphy, Racehorse Trainer

ALL WEATHER RACING SURFACES

High-performance, all-weather racing surfaces supplied worldwide

OVERVIEW

Manufactured in-house in our UK-based production facility, our all-weather racing surfaces have been developed following decades of in-depth research into horse biomechanics and performance.

Closely replicating turf, our racing surfaces are the most consistent available on today's market and are both fair and fast, with little jarring and minimal kickback, making them the stand-out choice for professional training grounds, racetracks, and private training facilities.

Durable, versatile, dust-free and requiring minimal maintenance, our surfaces have been designed to withstand the complex demands of the sport, providing a secure footing, excellent support for movement at high speed, and optimum levels of shock absorption and energy return, thereby reducing the risk of injury.

The specially formulated wax content within their makeup makes them both easy to maintain and adaptable, enabling you to modify the degree of compaction in order to produce a quicker or slower surface.

CUSHION TRACK™ RACING is our recommended surface

TRAINING SURFACES

Quality, adaptable training surfaces for private and professional use

ARENAS

Each of the surfaces in our Cushion Track™ Racing range has been developed following years of extensive research. Comprising multi-washed silica sand, environmentally friendly synthetic fibre, and a specially formulated wax, each surface is well suited to indoor and outdoor use across all racing disciplines, making our range the top choice for busy equestrian schools and private training arenas alike.

With wax acting as a core bonding agent in the mix, each surface provides a footing very similar to that of natural turf, whilst also remaining safe to use in all weather conditions and very easy to maintain.

GALLOPS

Expertly developed to offer consistency, durability, and excellent levels of grip and shock absorption in all weather conditions, our surfaces are well suited for use on gallops, each remaining adaptable in accordance with the needs and goals of the trainer.

Manufactured in the UK, our surfaces are of the highest quality available on the current market, providing an excellent footing and a surface that is both fast and fair.

LUNGE PENS

Being smaller in area than an arena or gallop, a lunge pen needs to have a high-quality riding surface installed to ensure horses can move freely within the restricted space without sustaining injury.

Whilst providing a secure footing is essential, the surface of a lunge pen must also be hard-wearing and durable, offering good levels of energy return and excellent support for joints and limbs.

SCHOOLING STRIPS

With the ability to perform equally well as a looser surface, for physically working horses that little bit harder, or when rolled tighter to create a faster surface, our surfaces come highly recommended by professional jockeys and horse trainers alike, and are known within the industry for their ability to minimise injury, reduce kickback, and increase stability.

TRAINING TRACKS

Used for building strength, canter and training tracks usually require a surface which is not only highly durable, but also adaptable, allowing users to maintain a softer footing and more open tilth to enable horses to work deeper into the surface and develop their stamina, core strength and aerobic capacity.

Informed by years of extensive research, the composition of our training surfaces is perfectly balanced to offer excellent levels of shock absorption and energy return, supporting the horse's joints and minimising the risk of injury.

CUSHION TRACK™ PREMIER or **WAX TRACK+** are our recommended surfaces

WHAT WE OFFER

Services tailored to your needs

Manufacture

Utilising state-of-the-art technology and top-of-the-range equipment, Equestrian Surfaces Ltd always strives to remain at the forefront of the industry when it comes to product innovation and business development.

Known for the quality and range of products that we offer, all of our surfaces are manufactured in-house in the UK.

Every grain of sand and thread of fibre that forms the content of each surface is meticulously monitored digitally, allowing us to be confident in guaranteeing the consistency in the quality of our products.

- Surface options for training and racing
- Suitable for all-weather use
- ISO 9001 UKAS accredited processes, standards and procedures
- Made in Britain
- Proven performance, tried and tested worldwide
- Unrivalled experience

Supply

From Equestrian Surfaces Ltd, you can expect a tailored solution suited to your needs.

All of our surfaces can be purchased on a supply-only basis, allowing you the freedom to manage your own project with your own equipment and selected team of construction and installation staff. If you prefer, you can also arrange your own haulage service to collect your materials from our UK-based warehouse.

- Complete freedom over the logistics of your project
- Able to supply anywhere in the world
- Delivered straight to your site, or collect from our UK warehouse

Site Supervision & Installation

If your project involves the refurbishment of an existing arena, track or surface for renewed performance, our dedicated installation teams are on hand to ensure every stage of the process goes smoothly.

Whether you'd like to fit an entirely new surface or simply top-up your existing surface, we can guarantee you will feel and notice a difference straight away.

- Replace or refurbish your surface for renewed performance
- Expert installation team
- Keep riders happy and horses healthy

For further information on our surface range, or how Equestrian Surfaces can help with your project, speak to our team on +44 (0) 1282 834 970 or email info@cushiontrack.co.uk.

For more information on our maintenance packages, trackmasters, or how Equestrian Surfaces can help with your project, speak to our team on +44 (0) 1282 834 970 or email info@cushiontrack.co.uk.

Maintenance

At Equestrian Surfaces Ltd, we have the capacity to manage every stage of your project, from planning through to completion, and beyond.

Our maintenance packages provide a comprehensive service and are offered on a subscription basis. With monthly or annual payment options available, an Equestrian Surfaces maintenance package will ensure your surface remains safe to ride on, whilst increasing its lifespan and optimising performance for riders.

We also offer a comprehensive maintenance schedule for racetracks and their track managers, which includes monthly reports and surface analysis, and event day maintenance carried out by members of our own team.

- A range of packages, tailored to your needs
- Package services include: lifting/re-laying your surface, harrowing/aerating your surface, and re-levelling
- Maintain a safe surface, increase its lifespan, optimise performance

Trackmaster Range

For improved stability and continued performance, our high-quality graders are the perfect tool for keeping your surface in top condition. Manufactured in-house by our experienced team of technicians, our Trackmasters are available in three sizes, or can be custom built to bespoke sizes to suit your requirements.

We also offer a colour-matching service, allowing you to have your new trackmaster finished in a custom colour to match or compliment your existing maintenance equipment.

- Revitalised levels of stability and improved consistency
- Can be towed by a small tractor, quad bike or gator
- Sizes include 2.3m, 1.8m and 1.5m
- Colour matching available

Finance Options

in partnership with

Do it with finance, do it with Portman.

We offer a personal and professional service. There's no complex call centre or different departments to deal with, your dedicated Account Manager will understand your needs then guide you through the process, preparing documentation and finance proposals so you don't have to, then they'll find the right deal for you.

Speak to a member of our team to find out more.

- Get what you need now
- Affordable monthly payments
- Fixed interest rates
- Spread the cost
